

# Macquarie Bank Limited

## Key Rating Drivers

**Outlook Revised to Stable:** Fitch Ratings revised the Outlook on Macquarie Bank Limited's (MBL) Long-Term Issuer Default Rating to Stable, from Negative, in May 2021. This was based to lower downside risk to the bank's Viability Rating, as the operating environment was stronger than Fitch had anticipated in May 2020 when it revised the Outlook to Negative. Strong levels of support and stimulus from the authorities in MBL's core markets and diverse business model have also resulted in asset quality and earnings exceeding our expectations.

**Risk Management Underpins Ratings:** The IDR and Viability Rating are underpinned by MBL's robust risk management framework and high-quality management team, which have maintained a strong financial profile over a number of years. These offset its significantly more complex business model and larger risk appetite relative to Australian retail banks and a higher reliance on wholesale funding compared with international peers.

**Rated Above Parent:** MBL is rated one notch above its parent, Macquarie Group Limited (MGL; A-/Stable/a-), due to the bank's stronger standalone risk profile and greater regulatory oversight relative to the consolidated group.

**Better Loan Performance than Fitch Expected:** Asset quality remained satisfactory during the coronavirus pandemic, as evident through a rapid decline in the number of loans on repayment deferrals through to end-March 2021. Some downside risk remains as government support measures are unwound, but we believe there are sufficient buffers to warrant revising the factor outlook to stable.

**Earnings to Moderate:** MBL's earnings and profitability were resilient through the pandemic, assisted by a strong uplift in earnings from market-facing activities, particularly in the commodities and global markets business. We expect some moderation in earnings in 2022, but for MBL's core metrics to remain consistent with its 'a' factor score and have revised the outlook on the score to stable as a result.

**Sound Capital Buffers:** Capital buffers continued to improve in the financial year ending March 2021 (FY21), despite weaker operating conditions, and we believe there is a large cushion to absorb any shocks to earnings or asset quality. MBL's common equity Tier 1 (CET1) ratio using the local regulatory framework increased to 12.6% in FY21 (FY20: 12.2%), which the bank estimates is equivalent to 16.2% on a globally harmonised basis.

**Strong Liquidity Management:** We expect limited funding and liquidity pressure over the next 18 months; MBL's conservative liquidity management offsets its high reliance on wholesale funding relative to international peers. This is reflected in an average liquidity coverage ratio of 174% in 4QFY21 and a net stable funding ratio of 115%.

## Rating Sensitivities

**Core Metric Deterioration:** MBL's Viability Rating and Long-Term IDR may be downgraded if its financial profile weakens significantly. This could be reflected in a combination of the four-year average of Stage 3 loans/gross loans increasing to above 3%, the four-year average of operating profit/risk-weighted assets falling below 1.5% or the CET1 ratio falling below 10% without a credible plan to restore it above this level.

**Weakening Risk Appetite:** A deterioration or findings of significant deficiencies in MBL's risk-management framework and liquidity management could pressure the ratings, as it could indicate that the starting point for risk appetite, funding and liquidity may be lower than Fitch has factored into its scoring.

**Significant Changes**

**All Factor Outlooks Stable**

We revised the operating environment, asset quality and earnings and profitability factor outlooks to stable, from negative, as part of the review completed on 18 May 2021. Downward pressure on MBL's Viability Rating has reduced as a result of economic conditions and recovery being stronger than we had anticipated. We now expect headroom to be sufficient to maintain the current level over the next two years.

## Company Summary

### Weighted Average Approach to Operating Environment

Fitch utilises a weighted-average approach in determining MBL's operating environment score to incorporate the large portion of the business that is conducted outside Australia. Greater emphasis is given to Australia to reflect that it is MBL's home jurisdiction and the country's strong regulatory framework. Greater certainty in our economic base case and strong stimulus and support measures have contributed to the revision of MBL's operating environment score to stable, from negative.

### Undertakes Group Banking Operations

MBL is the registered bank within Macquarie group. It was Australia's fifth-largest bank by domestic assets at end-February 2021, accounting for 3.5% of total system assets. MBL's key businesses within the wider group include banking and financial services and part of the commodities and global markets segment. MBL's business model adds complexity relative to most retail-oriented Australian banks, but boosts geographic and revenue diversity.

### Aligned with Group Strategy

MBL's management quality, corporate governance and strategy are consistent with those of MGL, reflecting the high level of integration throughout the group; see the [Macquarie Group Limited](#) report for details.

### Strong Risk Management Framework

Credit risk is MBL's largest risk, accounting for around 83% of risk-weighted assets at FYE21. Much of this was generated by the loan portfolio (46% of total assets at FYE21), although MBL also has large securities (13%) and derivatives (9%) exposures, unlike most other local banks.

MBL's underwriting standards are aligned with the group and are broadly consistent with those of peers in the areas in which MBL writes loans. Mortgages accounted for 72% of total loans at FYE21 have been a key source of loan growth for the bank. Loan growth, at 13% in FY21, continued to outperform system levels and appeared to be assisted by product and servicing offerings and investment in systems rather than a weakening in underwriting standards. This has been partly evident in the continued reduction in mortgages with loan/value ratios of above 80%.

Securities exposure appears to be of better quality than the loan portfolio. Some exposure relates to client-initiated trades, although there is a small proportion of a proprietary nature. Derivatives exposure mostly relates to client hedging activity, with the bank seeking security for exposure to weak counterparties. Exposures are subject to limit policies and stress testing set at the group level.

Market risk appears manageable, accounting for about 6% of risk-weighted assets at FYE21, with much of the risk associated with MBL's securities operations captured in the credit-risk charge. Traded-market risk is MBL's main form of market risk. The bank says trading is primarily undertaken on behalf of clients and, where possible, interest rate risk in the banking book is transferred to the trading portfolio and overseen by the centralised risk management group. Non-traded foreign-currency exposure is hedged, unless specifically approved by the risk management group.

## Key Financial Metrics – Latest Developments

### Modest Weakening in Asset Quality Expected

MBL's asset quality tends to be stronger than that of the group, reflecting the lower risk profile of many of the bank's operations. This contributes to the 'a' factor score that is one notch higher than that of the consolidated group. MBL's asset quality has performed better than we expected throughout the pandemic, but we still forecast some weakening in asset quality metrics as support measures are unwound in 2021. However, the core metric should remain at levels commensurate with an 'a' factor score, which has contributed to the revision of the asset quality outlook to stable, from negative.

Loans made up around 45% of total assets at FYE21, most of which were residential mortgages. MBL has less exposure to large corporates relative to the group, as much of its exposure originating within the non-banking operations. This has historically resulted in MBL having a stronger and less volatile Stage 3/gross loans ratio relative to the group. Non-loan financial-asset quality is stronger than the loan portfolio and we expect this to remain the case.

### Earnings Maintained Throughout Pandemic

A stronger economic recovery than we expected, combined with the bank's diverse business model, resulted in FY21 profit exceeding our forecasts. We believe earnings will moderate in FY22, as we do not anticipate a repeat of conditions and events that drove strong trading income in the last financial year. MBL's business model has greater diversity than more retail-orientated domestic peers, but this could also result in higher volatility through the cycle considering the former's significant market facing businesses.

### Capitalisation Broadly Stable

MBL's capitalisation improved throughout the pandemic and we expect its CET1 ratio to remain consistent with an 'a' factor score. We believe capitalisation will continue to be supported by appropriate profit retention and access to group capital, if required.

MBL's regulatory capital adequacy is calculated using the foundation internal ratings-based approach for credit risk and the advanced measurement approach for operational risk under Basel III. MBL's CET1 ratio rose to 12.6% in FY21, which the bank estimates is equivalent to 16.2% under the globally harmonised full Basel III framework. The difference between the Australian regulatory and harmonised ratios is driven by the country's conservative mortgage risk-weights and capital deductions; these relate to deductions for equity investments, loan and lease origination fees and commissions and deferred tax assets.

MBL's Basel III leverage ratio, as calculated by the Australian Prudential Regulation Authority, was 5.5% at FYE21 (FYE20: 5.7%), and remains well in excess of the 3.5% minimum proposed by the regulator. Capital in MBL is ringfenced from the broader group – dividends can only be paid out of current-year earnings unless approved by the regulator.

### Sound Liquidity Management

MBL's funding profile skewed more towards customer deposits through 2020 as a result of high deposit inflows, partly driven by strong system support from authorities. The loan/customer deposit ratio improved to 119% in FY21 (FY20: 131%), but we think MBL is still highly reliant on wholesale funding sources when compared with international bank peers. This risk is offset by MBL's strong liquidity and wholesale funding management, combined with access to central bank funding facilities, if required.

Wholesale funding accounted for 49% of total funding in FY21, with the rest comprising customer deposits. The bank's wholesale funding remains diversified by maturity, currency and investor. Foreign currency risk is managed through foreign-currency borrowings, which are either hedged into the currency of the funded asset or aligned to foreign-currency assets.

MBL's liquidity policies are set so the bank is able to meet its obligations over a 12-month period in the event of funding market disruption or a downturn in its business. This has historically meant that the bank holds higher levels of liquid assets relative to domestic peers and we expect this to remain the case. MBL's Basel III liquidity coverage ratio averaged 174% in 4Q21 and it reported a Basel III net stable funding ratio of 115% at FYE21, both well in excess of regulatory minimums.

Energy Management	1	n.a.	n.a.
Water & Wastewater Management	1	n.a.	n.a.
Waste & Hazardous Materials Management; Ecological Impacts	1	n.a.	n.a.
Exposure to Environmental Impacts	2	Impact of extreme weather events on assets and/or operations and corresponding risk appetite & management; catastrophe risk; credit concentrations	Company Profile; Management & Strategy; Risk Appetite; Asset Quality

#### How to Read This Page

ESG scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant and green (1) is least relevant.

The Environmental (E), Social (S) and Governance (G) tables break out the individual components of the scale. The right-hand box shows the aggregate E, S, or G score. General Issues are relevant across all markets with Sector-Specific Issues unique to a particular industry group. Scores are assigned to each sector-specific issue. These scores signify the credit-relevance of the sector-specific issues to the issuing entity's overall credit rating. The Reference box highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis.

The Credit-Relevant ESG Derivation table shows the overall ESG score. This score signifies the credit relevance of combined E, S and G issues to the entity's credit rating. The three columns to the left of the overall ESG score summarize the issuing entity's sub-component ESG scores. The box on the far left identifies some of the main ESG issues that are drivers or potential drivers of the issuing entity's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the score.

Classification of ESG issues has been developed from Fitch's sector ratings criteria. The General Issues and Sector-Specific Issues draw on the classification standards published by the United Nations Principles for Responsible Investing (PRI) and the Sustainability Accounting Standards Board (SASB).

Sector references in the scale definitions below refer to Sector as displayed in the Sector Details box on page 1 of the navigator.

#### Social (S)

General Issues	S Score	Sector-Specific Issues	Reference
Human Rights, Community Relations, Access & Affordability	2	Services for underbanked and underserved communities; SME and community development programs; financial literacy programs	Company Profile; Management & Strategy; Risk Appetite
Customer Welfare - Fair Messaging, Privacy & Data Security	3	Compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security)	Operating Environment; Company Profile; Management & Strategy; Risk Appetite
Labor Relations & Practices	2	Impact of labor negotiations, including board/employee compensation and composition	Company Profile; Management & Strategy
Employee Wellbeing	1	n.a.	n.a.
Exposure to Social Impacts	2	Shift in social or consumer preferences as a result of an institution's social positions, or social and/or political disapproval of core banking practices	Company Profile; Financial Profile

#### Governance (G)

General Issues	G Score	Sector-Specific Issues	Reference
Management Strategy	3	Operational implementation of strategy	Management & Strategy
Governance Structure	3	Board independence and effectiveness; ownership concentration; protection of creditor/stakeholder rights; legal/compliance risks; business continuity; key person risk; related party transactions	Management & Strategy; Earnings & Profitability; Capitalisation & Leverage
Group Structure	3	Organizational structure; appropriateness relative to business model; opacity; intra-group dynamics; ownership	Company Profile
Financial Transparency	3	Quality and frequency of financial reporting and auditing processes	Management & Strategy

CREDIT-RELEVANT ESG SCALE	
How relevant are E, S and G issues to the overall credit rating?	
5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to "higher" relative importance within Navigator.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to "moderate" relative importance within Navigator.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to "lower" relative importance within Navigator.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.

The highest level of ESG credit relevance, if present, is a score of '3'. This means ESG issues are credit-neutral or have only a minimal credit impact on the entity(ies), either due to their nature or to the way in which they are being managed by the entity(ies). For more information on Fitch's ESG Relevance Scores, visit [www.fitchratings.com/esg](http://www.fitchratings.com/esg)

The ratings above were solicited and assigned or maintained at the request of the rated entity/issuer or a related third party. Any exceptions follow below.

Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.
