## What are the Macquarie Access Multi-Asset Portfolios?

The suite of Macquarie Access Multi-Asset Portfolios (“Access Portfolios”) are a suite of low-cost diversified portfolios, utilising expert asset allocation, that seek to provide investors with optimised portfolios tailored to four risk profiles.

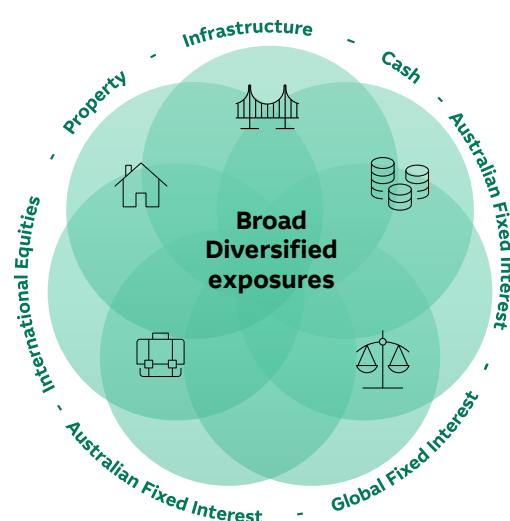

These high quality, low-cost portfolios are constructed using Macquarie’s innovative True Index Funds, an institutional quality form of passive investing which provides benchmark returns for no management fee. The True Index Funds in the Access Portfolios range across markets and asset classes to provide a broad diversified portfolio, essential for any investor seeking to maximise risk adjusted returns.

## What is the style of asset allocation?

The Access investment process starts with a multi-asset mean variance optimisation approach to determine a strategic asset allocation (SAA) adapted to each of the four risk profiles: Conservative, Balanced, Growth and High Growth. Each SAA utilises key inputs from our time tested proprietary quantitative and qualitative processes to set strategic asset allocation weights every 12 months. Once the SAA weights are set, a tactical asset allocation (TAA) may take place. The TAA is a shorter-term asset allocation decision, which may deviate from the SAA weights, that aims to adapt the portfolio’s asset allocation to the investment team’s outlook for markets over a three to six month time horizon. Ultimately, the goal of our asset allocation is to:

- tailor each solution to a specific risk profile; and
- maximise returns, within the given risk tolerance profile, throughout different market cycles.

The SAA sets the strategic weights for the portfolios for the year ahead, while the TAA is reviewed on a continuous basis with a three to six month outlook.

## Portfolio risk profiles

The Macquarie Access Multi-Asset Portfolios are carefully constructed and tailored to four key risk profiles, providing different portfolios for different investment needs.

Conservative	Balanced	Growth	High Growth
<b>Investment objective:</b> Aims to provide positive returns of 1.5% per annum above Australian inflation <sup>1</sup> over the medium to long-term (before fees).	Aims to provide positive returns of 3.0% per annum above Australian inflation <sup>1</sup> over the medium to long-term (before fees).	Aims to provide positive returns of 4.5% per annum above Australian inflation <sup>1</sup> over the medium to long-term (before fees).	Aims to provide positive returns of 5.0% per annum above Australian inflation <sup>1</sup> over the medium to long-term (before fees).

1. Inflation is defined as the Consumer Price Index (CPI) as measured by the Reserve Bank of Australia Trimmed Mean, as published by the Australian Bureau of Statistics.

Listed Global Infrastructure	Macquarie True Index Global Infrastructure Securities Fund Macquarie Hedged Index Global Infrastructure Securities Fund	MAQ0831AU MAQ0829AU

## Strategy risks

All investments carry risk. Different investments carry different levels of risk, depending on the investment strategy and the underlying assets. Generally, the higher the potential return of an investment, the greater the risk. The risks of investing in the Macquarie Access Multi Asset Portfolios include:

**Investment risk:** The Portfolios seek to generate higher returns than traditional cash investments. The risk of an investment in the Portfolios is higher than an investment in a typical bank account or term deposit. Amounts distributed to investors may fluctuate, as may the portfolios' values. The portfolio values may vary by material amounts, even over short periods of time, including during the period between a redemption or application request being made and the time the redemption unit price or application unit price for the underlying Funds are calculated.

**Index risk:** The underlying Funds aim to provide investors with a return matching the Index return. Under True Indexing, the Index return provided by the underlying Funds is independent of the Investment Manager's performance. The performance of the Index and therefore the underlying Funds is subject to many risks, including general market risk, as well as specific risk arising from the individual securities that make up the Index.

**Income securities risk:** The Portfolios may have exposure to a range of income securities, including high yield, emerging markets, and structured securities. The value of these securities may fall, for example due to market volatility, interest rate movements, perceptions of credit quality, supply and demand pressures, market sentiment or issuer default. These risks may be greater for securities offering higher returns, for example high yield or emerging market securities. These risks will be greater for Portfolios with a higher exposure to fixed income securities.

**Market risk:** The investments that the Portfolios have exposure to are likely to have a broad correlation with share markets in general. Share markets can be volatile and have the potential to fall by large amounts over short periods of time. Poor performance or losses in domestic and/or global share markets are likely to negatively impact the overall performance of the Portfolios. These risks will be greater for Portfolios with a higher exposure to equity securities.

**Manager risk:** There is no guarantee that the Portfolio will achieve its performance objectives, produce returns that are positive, or compare favourably against its peers. In addition, the investment strategies and internal trading guidelines may vary over time, and there is no guarantee that such changes would produce favourable outcomes.

**Implementation risk:** The performance of a managed account will differ to that of the Portfolio (and may differ significantly) due to factors including an incomplete implementation of all trades, the timing of trades, the individual circumstances of an investor as well as the fees, expenses and other costs charged by the operator of the managed account.

**More information on the risks of investing in SMAs is contained in the relevant Product Disclosure Statement for the SMA, which should be considered before deciding to invest in the Macquarie Access Multi-Asset Portfolios.**
